Pred. ŏ. is the number of results predicted by chance to have מ

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The nucleotide sequence of this BAC clone was generated by combining Monsanto and RGP-Japan sequencing data.

NOTE: It currently consists of 1 contigs Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence.

* This sequence will be replaced

* the finished sequence as soon as it is available and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Agrobiological Sciences, Rice Genome Research Program; Kannondai 2-1-2, Tsukuba, Ibaraki 305-8602, Japan (E-mail:tsasaki@nias.affrc.go.jp, URL:http://rgp.dna.affrc.go.jp/. NOTE: It currently consists of I contigs. Gaps between the contigs are represented as runs of N. The order of the yieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* This is a 'working draft' sequence.

NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is a valiable and the accession number will be preserved.

Data from ACO92170 and ACO64870 was used to finish this clone, ACO19057. Polymorphisms exist between RP11-121A1, RP11-814G20, and RP11-575E20. Location/Qualifiers 1. 186896 /organism="Homo sapiens" /db_xref="reaxon:9606" /chromosome="2" /clone="1b="RPCI-11" /clone="RP11-121A1" /clone=1ib="RPCI-11" /clone=1ib="RPCI-11" /clone=1ib="RPCI-11" /clone=1ib="RPCI-11" /clone=1ib="RPCI-11" /clone=1ib="RPCI-11" /rept_family="AT_rich" repeat_region	This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >-30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest. MAPPING INFORMATION: Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis Sequence, see http://genome.wustl.edu/gsc SOURCE INFORMATION: The RCCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu) WECTOR: pBACe3 6 NEIGHBORING SEQUENCE INFORMATION: The clone sequenced to the Jeft is RP11-814G20; the clone sequenced to the right is RP11-575E20, 2000 bp overlap. Actual start of this clone is at base position 1 of RP11-12IA1; actual end is at base position and compact and c	AUTHORS Waterston, R. (I) is useful for:

(a) assessing whether a patient is afflicted with prostate cancer;

(b) monitoring the progression of prostate cancer in a patient;

(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                        17-FEB-2000;

proteins, called pancreatic cancer antigens, given in AAB54008 to AAB54466. The human pancreatic cancer antigens have cytostatic, neuroprotective, nootropic, immunomodulatory, relaxant, contraceptive, gynaecological, cardiant and antiinflammacory activities, and can be us in gene therapy. The polynucleotide and proteins can be used for preventing, treating, or ameliorating a medical condition or in assays for diagnosing a pathological condition or a susceptibility to one in a subject. Binding partners to the proteins and the activity of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         nootropic; immunomodulatory; relaxant; contraceptive; gynaecological; antiinflammatory; cardiant; gene therapy; chromosome mapping; linkage analysis; tissue identification; tissue typing; forensic; neural; immune system; muscular; reproductive; gastrointestinal; pulmonary; cardiovascular; renal; proliferative; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid that is a pancreatic cancer antigen for preventing, treating, or ameliorating a medical condition, particular pancreatic cancer, or for use in assays for diagnosing a pathological condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            09-MAR-2001 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAC98823 standard; cDNA; 1527

proteins can be identified. The pancreatic cancer antigens can be used to detect, treat or prevent pancreatic disorders, especial, y cancer. Agonists and antagonists to the antigens can be screened for. The pancreatic cancer antigen polynucleotides can be used to design nucleic acid hybridisation probes that can be used in chromosome mapping, linkage analysis, tissue identification and/or typing and a variety of forensic and diagnostic methods. The proteins can be used to generate antibodies which are used to purify, detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to treat or prevent neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal or proliferative disorders. CC human secreted proteins given in AAY87064 to AAY87223. Human secreted CC protein can have activities based on the tissues and cells the genes are CC expressed in. Examples of activities include: cytostatic; Immunosuppressive; antiinflammatory; nootropic: neuroprotective; and CC immunosuppressive; antiinflammatory; nootropic: neuroprotective; and CC antiallergic. The polynuclectides and their corresponding secreted CC polypeptides are useful for preventing, treating or ameliorating medical CC conditions, e.g. by protein or gene therapy. Also pathological conditions CC can be diagnosed by determining the amount of the new polypeptides in a CC sample or by determining the presence of mutations in the new polynucleotides. Human secreted protein s and their polynucleotides can CC tumours, neurodegenerative disorders, diseases of the immune system, CC tumours, neurodegenerative disorders, diseases of the immune system, CC allergies, Alzheimer's diseases, behavioural disorders, schizophrenia, CC osteoporosis, arthritis, infections, AIDS, spinal cord injuries, CC transplant rejection, diabetes, asthma, sepsis, acne, psoriasis, CC disorders, respiratory disorders and metabolic disorders. The CC disorders, The proteins are also useful for identifying their CC preservatives. The proteins are also useful for identifying their the proteins or polynucleotides can also be used as food additives or the examplification of the noncent invention.

CC protein genes, and AREGO41-AREGO42 represent the proteins they encode.
CC protein genes, and AREGO41-AREGO43 represent the protein fragments.
AREGO613-AREGO42-AREGO43 represent the protein fragments.
CC The secreted proteins and their genes are useful for preventing, treating cor ameliorating medical conditions, e.g., by protein or yens therapy.
CC Pathological conditions can be diagnosed by determining the amount of the cent of the insured protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 71 genes, concer, tumours, foetal and developmental abnormalities, diseases (e.g., rheumatoid arthritis), inflammation, altergies, congultive disorders (e.g., Alzheimer's disease, Parkinson's disease), cc ognitive disorders, schizophrenia, asthma, skin disorders (e.g., anglogenic disorders, schozorine disorders, and infections. The crophenis can also be used to ald wound healing and epithelial cell corpolations can also be used to ald wound healing and epithelial cell corpolation of the invention can be used in alleviating symptoms associated corpolation of the invention can be used in alleviating symptoms associated corpolation of the invention can be used in alleviating symptoms associated corpolation of the invention can be used in alleviating symptoms associated corpolation of the invention can be used in alleviating symptoms associated corpolation of the invention can be used in alleviating symptoms associated corpolations. The present sequence represents a human secreted protein-encoding cDNA of the disorders mentioned above, and in sagnostic immunoassays e.g., and can be used to manufact the condition of the corpolation of the corpolation of the corpolation of the corpolation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAD11630-AAD11721 represent cDNAs corresponding to 71 human secreted

                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid molecule (or its of fragment, homologue complement or alleik variant) encoding a human or secreted protein (and its fragment, domain, epitope, variant, secreted comprising the nucleic acid, a recombinant host cell comprising the nucleic acid, a recombinant host cell comprising the nucleic acid, a recombinant host cell comprising the vector, an antibody against the secreted protein, a recombinant host cell comprising the partner of the secreted protein and a method of identifying a binding that expresses the secreted protein and a method of identifying a binding that expresses, treat or ameliorate a medical condition in e.g. or revent, diagnose, treat or ameliorate a medical condition in e.g. or for example autoimmune diseases e.g. rehumatoid arthritis, hyperproliferative disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, verebrovascular disorders e.g. conneal infection. Many other diseases and fungi and collar disorders are listed in the specification. The polypeptides can also be used as a food additive or prevent of primary tissues, to regenerate tissues and in change changes and one apithelial cell proliferation. The prevent conservative to increase or decrease storage capabilities. The present expression to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           vasotropic; cerebroprotective; nootropic; neuroprotective; antibacterial; virucide; fungicide; opthalmalogical; autoimmune disease; neoplasm; rheumatoid arthritis; hyperproliferative disorder; cardiac arrest; cardiovascular disorder; cerebrovascular disorder; cerebral ischaemia; angiogenesis; nervous system disorder; alzheimer's disease; infection; ocular disorder; corneal infection; wound healing; skin aging; epithelial cell proliferation; food additive.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAA37022 to AAA37144 encode the new isolated human transmembrane, receptor or secreted PRO polypeptides given in AAY99340 to AAY99462. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences encoding then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA37130 represent PCR primers and hybridisation probes used in the isolation of the PRO polypeptides from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homo

This is the nucleotide sequence of cDNA clone DNA60764 (ATCC 203452) coding for human PRO1265 (UNG636) (see AAV66480). The clone was isolated from an adenoid tissue library. Amplification of DNA60764 on chromosome 19 occurs in various lung and colon tumours and cell lines, suggesting a significant role in tumour formation and growth. Antagonists (e.g. antibodies) directed tot PRO1265 are expected to find use in cancer therapy. The invention identifies 14 genes (see AAX87254-67) that are amplified in the genome of tumour cells. Such amplification is expected to be associated with overexpression of the gene product and to contribute to tumorigenesis. The encoded proteins (see AAX6477-90) may be useful targets for the diagnosis and/or treatment (including prevention) of certain cancers, and may act as predictors of the prognosis of tumour treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PRO201; PRO292; PRO327; PRO1265; PRO344; PRO343; PRO347; PRO357; PRO715; PRO1017; PRO1112; PRO509; PRO853; PRO882; tumour cell; tumourigenesis; cancer; neoplastic cell growth; cell proliferatio

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes a novel human polypeptide. The specification describes novel polypeptides designated PRO201, PRO292, PRO327, PRO1265, PRO344, PRO343, PRO347, PRO315, PRO1017, PRO1112, PRO509, PRO853 and PRO882. These genes are amplified in the genome of tumour cells. The polypeptides are believed to contribute to tumourigenesis. The polypeptides are useful target for the identification of certain cancers, and may act as predictors of the prognosis of tumour treatment. Antibodies against these polypeptides are useful in the treatment and diagnosis of neoplastic cell growth and proliferation in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1787
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo sapiens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                            õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC AAS21244-AAS21518 encode for novel human secretory and transmembrane CC PRO polypeptides. The PRO polypeptides are useful to detect other CC PRO polypeptides, to link bloattive molecules to cells expressing CC PRO polypeptides, to modulate biological activities of cells expressing CC PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO CC breast, prostate, rectal, cervical or liver tumours by comparing PRO CC polypeptide expression in a cell sample to that in a control sample. CC some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TWF-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or cC gene expression in pericyte cells, the release of proteoglycans from CC cartilage, the proliferation of inner ear utricular supporting cells or cC monocytes (PBMCS), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by CC skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide CC molecules involved in binding interactions. The polymucleotides encoding PRO polypeptides can be used to generate probes, antisense RNA/DNA, CC transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

The present sequence is a cDNA (DNA60764-1533 clone) encoding PR01265 CC protein. PRO protein, its agonist or antagonist or its antibody which care capable of enhancing or inhibiting the proliferation of T-lymphocytes CC or of increasing the infiltration of inflammatory cells into a tissue care useful in the diagnosis and treatment of immune-related diseases CC in mammals. The PRO protein is useful for treating systemic lupus CC erythematosis, rheumatoid arthritis, osteoarthritis, juvenile chronic carthritis, spondyloarthropathy, systemic sclerosis, iddopathic carcidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopenia, CC thyroiditis, diabetes mellitus, immune-mediated renal cisease, cellitus, diabetes mellitus, immune-mediated renal cisease, confectious or autoimmune chronic active hepathitis, primary CC disease, infectious or autoimmune chronic active hepathitis, primary CC disease, infectious or autoimmune chronic active hepathitis, primary CC disease, autoimmune or immune-mediated skin diseases such as bullous chronic disease, erythema multiforme and contact dermatitis, psoriasis, callergic disease, erythema multiforme and contact dermatitis, psoriasis, callergic disease, erythema multiforme and contact dermatitis, psoriasis, contact diseases of the lung cuch as eosinophilic pneumonias, idiopathic pulmonary fibrosis, hyper-cc sensitivity pneumoniats, transplantation associated diseases such as such as sociation or craft versus-host-disease. New PRO polypeptides for treating immune related and inflammatory diseases such as rheumatoid arthritis, systemic vasculitis, asthm Claim 2; Fig 1; 118pp; English. autoimmune hemolytic anemia, and ritis, systemic vasculitis, asthma. diabetes mellitus -T-lymphocytes

                                                                                             The present invention relates to secreted and transmembrane proteins. These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of anti-sense RNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy.
                                                                                                                                                                                                                                                                                       Baker KP, Botstein

```

The present sequence is one of twenty eight nucleic acids encoding PRO polypeptides. The PRO polypeptides and their agonists, including antibodies, peptides, and small molecule agonists, may be used to trea various tumours, e.g., cancers such as breast cancer, ovarian cancer, renal cancer, colorectal cancer, uterine cancer, prostate cancer, lung cancer, bladder cancer, central nervous system cancer, melanoma or leukaemia. They are also useful for treating other disorders such as neuronal, gliai, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastocoelic disorders, and inflammatory, angiogenic and immunological disorders.

Twenty eight nucleic acids encoding PRO polypeptides for treating various tumors, e.g. breast cancer, and inflammatory, angiogenic and immunological disorders

These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophhebitis lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The present sequence is a coding sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  One hundred and eighty seven nucleic acids encoding PRO polypeptides, useful in diagnosis and treatment of cardiovascular (e.g. myocardial infarction), endothelial or anglogenic disorders in a mammal -
